	Connector ty	<i>т</i> ре	Part number			Note		
Single stack right angle SMT connector main body		△1 HDRA-ED68LFZG()-(L)+		VHDCI 68 Pos. right angle SMT connector				
	piece type)	SMT board connector	HDRA-ED68FYG+		with locking post and hold-down			
Mating cable connector			HDRA-E68M()1+		IDC type cable connector Wire size available: #28 to #34 AWG Applicable insulation O.D: $0.5 \sim 0.6$ mm			
Applicable cable connector backshell			HDRA-E68LGKPC		Shielded over molded backshell with thumb screws			
Char	racteristics							
No.	Item			Specification				
1	Current Rating 0.3 amp DC max			simum per contact				
2	Voltage Rating		30 volts AC (r.m.s.)					
3	Operating Temperature		-40°C to 70°C					
4	1 Storage Temperature		-40°C to 70°C					
5	Humidity		95%RH maximum					
6	Insulation Resistance		When tested in accordance with EIA 364-21, the insulation resistance shall be a minimum of 500 M $\!\Omega$ at 100 volts DC.					

Dielectric

Withstanding Voltage

Contact Resistance

minute.

8

When tested in accordance with Method B of EIA 364-20, there shall be

no breakdown of insulation or flashover at 250 volts AC (r.m.s.) for a

When tested in accordance with EIA 364-23, the contact resistance

shall not exceed 120 m Ω including the conductor resistance.

		Sheet 2 of 4		
No.	Item	Specification		
9	Female Contact Insertion and Pulling Force (Individual)	When tested in accordance with EIA 364·13, female contact insertion force and puling force shall satisfy followings. OInsertion Force The force required to insert the test gauge into any contact shall not exceed 1.47 N per contact. OPulling Force The force required to pull the test gauge from any contact shall not be less than 0.294 N per contact.		
		0.6mm 1.14±0.003mm		
10	Connector Insertion and Withdrawal Force (Overall)	 ○Insertion Force The force required to insert a connector into the mating one shall not exceed 54.8 N. ○Withdrawal Force The force required to withdraw a connector from the mating 		
11	Durability	one shall not be less than 14.7 N. When tested in accordance with EIA 364-09, there shall be no evidence damage to the connector such as cracking. After test, the contact resistance shall not exceed $150 \text{m}\Omega$.		
12	Vibration	When tested in accordance with EIA 364-28, there shall be no physical or mechanical damage to the connector. During vibration, there shall be no discontinuity of the test circuit greater than 1 microsecond. (100 mA DC of current applied for the circuit.) Frequency range: 10 Hz to 500 Hz at 4.44 G Test direction: Three axes		
13	Physical Shock	Test time: 20 minutes for each axis When tested in accordance with test condition H of EIA 364-27, there shall be no physical or mechanical damage to the connector. During the test, there shall be no discontinuity of the test circuit greater than 1 microsecond. (100 mA DC of current applied for the circuit.) Acceleration: 30 G peak Test direction: Three axes Test cycles: 6 cycles for each axis (Total 18 cycles)		
14	Humidity Temperature Cycling (Except Cable Connector Backshell)	Connectors are tested in accordance with method 3, test condition B of EIA 364-31. After the test, the insulation resistance shall be no less than 500 M Ω , there shall be no breakdown of insulation or flashover at 250 volts AC (r.m.s.) for a minute and the contact resistance shall not exceed 150m Ω .		

		Sheet 3 of 4
No.	Item	Specification
15	Thermal Shock (Except Cable Connector Backshell)	When tested in accordance with test condition 1 of EIA 364-32, there shall be no evidence of cracking or crazing of the body or other physical damage to the connector. After test, the contact resistance shall not exceed 150 m Ω .
		-55°C 30 min 5 5
16	When tested in accordance with test condition 3 of EIA364-17, the shall be no evidence of cracking or crazing of the body or other physical damage to the connector. After test, the contact resistance shall exceed 150 mΩ. Temperature: +85°C Test Time: 500 hours	
17	Salt Spray	When tested in accordance with test condition A of EIA 364·26, there shall be no any excessive corrosion on the every part of connector. After test, the contact resistance shall not exceed 150 m Ω . Salt spray concentration: 5 % Temperature: + 35°C Test time: 48 hours
18	Mix flowing Gas	When tested in accordance with environment class 3 of EIA 364-65, there shall be no any excessive corrosion on the every part of connector. After test, the contact resistance shall not exceed 150 m Ω . Concentration: Cl ₂ gas: 20 ± 5 ppb NO ₂ gas: 200 ± 50 ppb H ₂ S gas: 100 ± 20 ppb Temperature: $30\pm 2^{\circ}$ C Relative humidity: $75\pm 2\%$ Test Time: 20 days

Sheet 4 of 4

No.	Item	Specification
19	Solvent Resistance (Except Cable Connector Backshell)	When tested in accordance with method 215E of MIL-STD-202F, the connector shall be capable of being cleaned by ethyl alcohol. After test, there shall be no evidence of swelling, cracking, dissolving or any other defect.
20	Solderability	When SMT board connectors are assembled to printed circuit board, contact termination area must be soldered to the pad in PC Board at a temperature of $245\pm5^{\circ}\mathrm{C}$ for 10 seconds.
21	Solder Heat	When SMT board connectors are exposed in such environment at a maximum temperature of $265\pm5^{\circ}\mathrm{C}$ for $3{\sim}5$ seconds, there shall be no damage to the connectors.
